

Martin Pouzar

CUBE IN CUBE

Martin Pouzar creates jewelery. With precision and sophistication he connects, divides, inverts and combines geometrical shapes. Primary it is not only a question of the possibilities of the material nor it is simply a matter of technique. The goal is to elevate the found artifact, pay tribute to different materials, create an object which will become a personal talisman, a toy you never lend. For the residency he decided to develop his playful and constructive thinking and create a sculpture which examines the limits of the new microwave technology and the material.

Martin Pouzar, 1977, Graduated from the Arts and Crafts College, Jablonec nad Nisou, Department of applied art of metals, where he works now as a lecturer. Artist and professional designer of golden and silver jewelery, co-owner of the graphic studio and Internet gallery, Pentimenti. Numerous exhibitions in Czech Republic and abroad. www.martinpouzar.com
